Do Your Part!

Help keep our waterways clean. Garbage can affect the health of fish and wildlife that depend on these habitats. Soap, used motor oil, and leaves that wash down storm drains go directly to streams and the bay. Please dispose of all pollutants in the proper manner. Do your part! Clean up after yourself, and while you're at it, why not do a little extra?

- 19. Anderson Reservoir 779-3634-black bass, crappie, bluegill, catfish, sunfish, not stocked. Boating reservations required on weekends April-September. \$3 vehicle entry fee, \$5 vessel launch fee. Dial-a-Ride transit available.
- **20.** Coyote Lake 842-7800-black bass, bluegill, white crappie, green sunfish, catfish, stocked w/trout March-June. \$3 vehicle entry fee, \$5 vessel launch fee, camping available. No public transit.

Mercury, both naturally occurring and from old mining operations, has been found in the silt and food chain of the Almaden, Calero, Guadalupe reservoirs and the streams below. This has caused high levels of mercury in the fish found in these waters. These areas have been posted with signs by the Santa Clara County Health Department. Although other reservoirs and streams in the area have not been posted, tests indicate similar problems exist. It is recommended that, with the exception of planted trout and planted catfish, fish caught in these waters not be consumed.
